

TC & RTD Isolated Safety Barrier

NPEXA-H0D11

double input, double output

Input: TC or RTD

Output: 4 ~ 20 mA

Temperature input safety barrier, it converts the thermocouple or thermal resistance signals from a hazardous area into current signals to a safe area by isolation. It has external cold junction compensation terminals. The input, output, and power supply are galvanically isolated from each other. A self-test feature is also available on this device. You can use PC or handheld programmer to modify parameters.
